

CHURCH ALERT

HELPING YOU SAFEGUARD YOUR CHURCH FROM METAL THEFT

USEFUL SUPPLIERS

ANTI CLIMB PAINT

This product is an intruder deterrent, giving extra security and peace of mind. The paint creates a permanently greasy surface, restricting climbing and in most cases, warding off intruders. It is most effectively used on drainpipes, railings and gate or fence tops.

COO-VAR

Congregational has teamed up with anti-theft paint manufacturer Coo-Var who will be offering the chance to purchase their specialist 'Vandalene' anti-climb paint at a discounted rate of £47 per 5 litre tin. Vandalene is not recommended for use upon surfaces in areas which are subject to legitimate daily contact or below 7ft from the ground. When applied its presence should be clearly identified to the public (e.g. Warning Notices).

For more details, technical advice or to place an order please call Coo-Var on **01482 328 053** or email on info@coo-var.co.uk quoting 'church alert'.

DNA / FORENSIC CODING SYSTEMS

SELECTADNA™ DNA FORENSIC PROPERTY MARKING

'SELECTADNA Grease can prevent the theft of lead and other valuable metals from the roofs and exteriors of church buildings. The revolutionary solution is applied to the lead, so that if handled by a thief, it transfers onto their skin or clothing. The solution contains a UV Tracer to allow police to find traces on the offender with a UV light, and a unique DNA code which can be forensically analysed to link the criminal with the crime scene (each container supplied contains a different code). DNA and outdoor warning signs act as a deterrent to potential thieves. Even after several washes, traces of the UV and DNA will remain on the offender, and this makes SELECTADNA Grease a formidable tool in the fight against metal theft. SelectaDNA holds the Police Preferred 'Secured By Design' licence, and customer details are held on a Police and Insurance approved database.

Congregational customers are eligible to a 10% discount on quoting the discount code 'CGINS'. Covert forensic property marking kits are also available to identify valuable items inside churches, such as ornaments and artefacts.' For more information visit www.selectaDNA.co.uk

SMARTWATER

SmartWater is the market leading forensic coding system with a proven track record of reducing crime. It carries a unique forensic signature more robust than DNA and proves the ownership of any item, linking the criminal with the crime scene to enable prosecution and a conviction. SmartWater can be applied to interior and exterior metals, along with any other valuables. When subjected to ultraviolet light its presence is immediately obvious by a tell-tale fluorescent glow. The smallest amount is enough for forensic scientists to verify the registered owner.

RED WEB

Red Web is a dye that contains a unique biosynthetic DNA that is registered to the customer. It is painted on ultra violet element that becomes stronger as the dye fades and washes out. The unique registered DNA in each system used in the crime is matched through analysis to provide solid evidence and gain a conviction.
